

# MOMENTUM MONOBLOCK AMPLIFIER

Audiophiles know Dan D'Agostino as the world's most skilled and passionate designer of audio electronics, and the first to champion the use of high-powered solid-state amplifiers at this level. With the **MOMENTUM** monoblock amplifier, he begins anew with revolutionary concepts, innovative materials and a fresh-slate design. Efficient cooling is achieved with venturi-equipped copper heat sinks. The Momentum draws less than 1 watt of power at idle despite an impressive output of 300 watts into 8 ohms. It is stable at high frequencies into the lowest-impedance speakers. And true to Dan's obsession with detail, the Momentum establishes a new benchmark for build quality in the high-end arena.

*“Musical, warm sounding and authoritative. My best work.”*

*Daniel D'Agostino*
