

Nordost

For the last 30 years, Nordost has been at the zenith of cable design and development, and throughout that time it has stayed true to its core; producing low-mass cables with optimal signal transfer speed and ideal impedance matching.

The company has, in the process, racked up a number of 'firsts' in the

audio cable world; it was the first to use monofilament technology, which allowed Nordost to create the first truly flat high performance cables in audio. It found that cables have a natural resonance and that defines its optimal length. This ultimately extended down to individual conductors within a cable, necessitating the development of

custom connectors, and this results in what the brand dubs 'Total Signal Control' in its high-end cable systems.

Nordost also produces QRT audio enhancers and component resonant control systems... it's the full works!
