

# S4 Series

The S4 Series draws inspiration from decades of production results achieved by our historical Series. Thanks to the priority given on the quality research for the used materials, all the main characteristics of the previous technical products merge with the technical properties developed over the years from the Hyperspike range and give life to a new line of audio-video supports which is characterized by the excellence and simplicity of its components.

S4-4

The refined and basilar style of the discontinued Series is unmistakably present in the new S4 Series, which is always the result of passion for listening, for the audiophile experience and, above all, for music.

The need to offer a line of supports further extended in width and with the same dimensional characteristics between the levels of the S3's shelves, has led to the creation of a superlative new line of products ideal for listening music and enjoying video components.

An alternative as well to the more prestigious HW Hyperspike Series. On the wake then of the technical properties typical of the S3 Series, the S4 Series presents itself as a congenial solution both in terms of functional efficiency and of space management, without losing any aesthetic care.
