Como Blu Stereo

Como Audio's legacy products connect to Wi-Fi and support a multitude of different sources. If you're looking for something with Como Audio's trademark sound quality but do not need all those extra sources, Como Audio's Blu is for you. Blu is a stereo Bluetooth speaker system allowing wireless streaming from your Bluetooth-equipped smartphone, tablet, computer, or MP3 player. Stream your music files along with music from apps like Pandora, SiriusXM,

Spotify, Amazon Music, iHeart Radio, TuneIn, and others. Blu features a clock that auto sets to an iPhone or can be set manually, a backlight that adjusts automatically, a rear bass port that doubles as a carry handle, an external switching power supply with multiple regional plugs for use Internationally, and an Auxiliary input to connect wired devices. You can use the optional battery pack to make Blu portable. Also on board is a stereo headphone output and a dedicated bass control knob.

Blu features the same excellent sound as our other models with its 30 WPC Class D amplifier, two-way design, custom woofer, and ½" thick solid MDF cabinet, like a real hi-fi loudspeaker. As with our other models, Blu features an aluminum front panel and knobs, a non-slip bottom, and is available in a walnut finish. The included wired Como Blu Speaker makes

Blu a two-channel stereo system providing a broad sound stage that's lacking from many competing Bluetooth speakers in this price range. Connect Blu to Como Audio's Turntable Analog and your hi-fi system is complete. There is certainly no lack of choice when it comes to Bluetooth speakers, but we think you'll find few are like Blu.

FEATURES

- Wireless Bluetooth 4.2
 - Digital clock
 - Automatic backlight adjustment
 - Two-way design
 - MDF cabinet with real wood veneer
 - Rear bass port doubles as carry handle
