

# PHONO CARTRIDGES OF THE YEAR

**Ortofon MC  
Windfeld Ti**  
**\$4390**

The Ortofon MC Windfeld Ti is the newest version of the original MC Windfeld cartridge—a previous TAS Product of the Year Award winner. The Ti's body structure uses SLM (selective laser melting) titanium and stainless steel; its motor is similar to that of the MC A95. Sonically, the Ti allows a listener to play nearly every album in his catalog without being bothered by any sins of commission. This ability to play whatever, whenever, is one of the MC Windfeld Ti's biggest assets. If you value high neutrality and high resolution, low coloration and low distortion, and tracking ability that rivals the best moving magnets, then this outstanding new moving coil is for you. It won't gild your vinyl lilies, but it will reproduce them with highest fidelity. (286)
