"The new Ortofon Cadenzas achieve a level of fidelity that silences my critical faculties..."

- evenly balanced sound
- ultra fast and dynamic
- highly detailed

"they represent the best of modern LP playing technology, and lift sound quality into the laps of the Gods..."

**VERDICT** 

Wonderful sound from two great moving coil cartridges, both able to give astonishing results from LP. Breathtakingly good.

Both these new Cadenza cartridges are a fantastic hi-fi experience. They represent the best of modern LP playing technology and lift sound quality into the laps of the Gods. They achieve a level of fidelity that silences my critical faculties. Yes, they are expensive but if you have the money their sound borders on

magically beautiful. It hardly comes any better from LP. Well, there is a Cadenza Black, but my imagination can't quite stretch to how that can sound better than the Bronze at present. And whilst I survived my journey back with the Blue and Bronze, carrying a Black would be like trying to get the Cullinan Diamond out of Africa, and I may not be so lucky in such circumstances.
